## INTRODUCTION

BOKR  
6995141

In this report, retail trade (number of stores and 1961 sales) is shown by census tracts for the seventeen metropolitan areas, together with maps.

Census tracts are designed to be relatively uniform in area and population, such that each is fairly homogeneous with respect to economic status and living conditions. They are established in co-operation with local authorities, and, wherever possible, local census tract committees are formed to delineate the areas.

In conjunction with census tract data on population, housing, etc., the information presented here permits comparisons of social and economic factors within these large urban communities, which cannot be obtained from totals for the city or metropolitan area. Because of such comparisons, retail trade detail below the city level follows the census tracts as defined for population. In many cases, however, areas so delineated reveal no significant facts concerning retail stores and in certain areas results are withheld to avoid disclosure of individual business operations.

Information on total retail trade for all incorporated places of 1,000 population or more is shown in Census Bulletin 6.1-2, Catalogue No. 97-502. In this census tract report trade group detail is shown. At this level of detail, it is feasible to show only incorporated places and municipalities of 5,000 population or more. Places below this level are grouped under "Remaining metropolitan area". Within the places of 5,000 population or over, however, census tracts are all shown regardless of the population of the individual tract. The principal purpose of this report is to break down into finer areas the large cities rather than the fringe municipalities.

Comparisons with 1951 Census tracts are not always possible because of boundary changes. Statements of tract numbers for corresponding areas are contained in the CT Series for population and housing characteristics as published separately for each city. Maps showing census tracts for the metropolitan cities are appended to this report.

Dans le présent rapport, le commerce de détail, c'est-à-dire le nombre de magasins et le chiffre de vente de 1961, est indiqué par secteur de recensement relativement aux dix-sept zones métropolitaines, avec cartes géographiques.

Les secteurs de recensement sont destinés à être relativement uniformes en étendue et en population, de façon que chacun d'eux soit passablement homogène du point de vue économique et du niveau de vie. Ils sont établis avec le concours des autorités locales, et, lorsque la chose est possible, des comités locaux de secteurs de recensement sont formés afin de délimiter les secteurs.

Conjointement avec les données de secteurs de recensement sur la population, l'habitation, etc., les renseignements donnés ici permettent de comparer les facteurs sociaux et économiques dans ces grandes agglomérations urbaines, qui ne peuvent être extraits du total pour la ville ou la zone métropolitaine. A cause de telles comparaisons, les renseignements concernant le commerce de détail à un échelon inférieur à celui de la ville sont conformes aux secteurs de recensement tels qu'ils sont définis pour la population. Dans un grand nombre de cas, cependant, les secteurs ainsi délimités ne révèlent aucun fait d'importance au sujet des magasins de détail, et dans certaines régions les résultats sont retenus afin de ne pas divulguer les opérations des entreprises particulières.

Des renseignements sur le commerce de détail global pour tous les endroits constitués de 1,000 habitants ou plus figurent dans le bulletin du recensement 6.1-2, n° 97-502 au catalogue. Ce rapport sur les secteurs de recensement contient des renseignements sur les groupes de commerce de détail. A cet échelon de détail on ne peut indiquer que les endroits constitués et les municipalités de 5,000 habitants ou plus. Les endroits plus petits qu'à cet échelon sont groupés sous la rubrique "Zone métropolitaine restante". Dans les endroits de 5,000 habitants ou plus, toutefois, les secteurs de recensement sont tous indiqués sans égard à la population de chaque secteur. Le présent rapport vise surtout à décomposer en plus petits secteurs les grandes villes plutôt que les municipalités de banlieue.

Il n'est pas toujours possible d'établir des comparaisons avec les secteurs du recensement de 1951 à cause des changements de limites. Des tableaux sur le nombre de secteurs pour les secteurs correspondants figurent dans la Série relative aux secteurs de recensement sur les caractéristiques de la population et de l'habitation publiées séparément pour chaque ville. Des cartes indiquant les secteurs de recensement des villes métropolitaines sont annexées au présent rapport.

### SYMBOLS

- figures withheld to avoid disclosure of individual operations.
- nil or zero.

### SIGNES CONVENTIONNELS

- chiffres retenus afin de ne pas révéler les entreprises individuelles.
- néant ou zéro.
